TAIAN HUALU METALFORMING MACHINE TOOL CO.,LTD.

## Company Introduce

Taian Hualu Metalforming Machine Tool Co., Ltd. is established in 1968 which has 760 employees, and there are more than 460 sets of machining equipments. It is the key enterprise for producing the products such as the CNC plate bending machine, plate straightening machine, plate shearing machine, press brake, cut ot length lines. We have the right do the import and export business ourselves.

The company is the council member of CMTBA (China Machine Tool & Tool Builder' Association), State High and New Tech Enterprises, own the Provincial Enterprises Technology Center. We have the strong technology force and prominent innovation capacity. In recent years, our forcal pionts are the CNC, large-scale, energy-saving and environmental technology products. We devoted to the rolling of the shipyard-plate, the large plate taper workpiece rolling, and the high-intensity plate levelling, the explosion composite plate levelling and workpiece levelling research. We have achieved fruitful technological innovation achievements on the basis of the introduction, and absorption of Germany advanced technology. We have obtained more than 40 national patents, some of which have applied for the international patents; Our products has filled the national blank, reached the advanced international standards. They can completely replaced the imported products, and we have beared many national torch projects and key national project of new products; A variety of products have won the provincial "Science and Technology Advancement Prize", "Provincial Outstanding New Products Prize", etc. Relying on the independent intellectual property technology, the enterprise has promoted the core-competitiveness of products, products technology level and the domestic share of market are in the leading position, not only sold in domestic market, and many products are exported to Asia, Africa and European countries such as the Russia, India, and get high recognition in the international.

The company adhere to "quality first, customers first". The customer satisfaction is our target, creating the world famous brand as the goal, we have passed through the ISO9001 Quality System. Our "Daiyue" brand trademark is awarded "Shandong famous brand", the enterprise has been granted plural-honors for "2008 TOP Ten Shandong Machinery Industry brand of the independent innovation enterprise", "Provincial Respecting Contract and Obeying Reliability Enterprise".

The company continue the management concept of "Integrity, fairness, truth-seeking, innovative", warmly welcome new and old friends at home and abroad to visit!

WB11 系列

## 机械对称式三辊卷板机

WB11 series mechanical symmetric three-roll bending machine

WB11 series mechanical symmetric up three-roll bending machines is the common equipments specialized in the bending and forming of metal plates. The two lower rolls of the machine are active rolls. They are driven by motors and special reducers. The up roll is a passive roll, which could press plate by motor reducer, worm-gears and screw pair. The turn end is turned manually to take out the work-pieces. All operations of the machine are centrally controlled via electrics. It is easily to be operated and maintained.

Main technical parameters of WB11 series mechanical three-roll bending machine

产品规格 Production specification	最大板宽 (mm) Maximum plate width (mm)	最大板厚 (mm) Maximum plate thickness (mm)	最大板宽板厚时最小卷筒直径 (mm) Minimum roller diameter at maximum plate width and thickness (mm)	板材屈服极限 (MPa) Yield limit of plate (MPa)	上辊直径 (mm) Diameter of upper roller (mm)	下辊直径 (mm) Diameter of lower roller (mm)	下辊中心距 (mm) Lower roller central distance (mm)	卷板速度 (m/min) Plate rolling speed (m/ min)	主电机功率 (KW) Power of main motor (KW)
3 × 1500	1500	3	300	≤ 245	150	130	200	5.7	7.5
5 × 2000	2000	5	500	≤ 245	190	170	250	5.5	11
5 × 2500	2500	5	500	≤ 245	190	170	250	5.5	11

## WB12 系列

## 液压四辊卷板机

### WB12 series CNC four-roll rolling machine

WB12K(N) series CNC four-roll bending machine can complete the end pre-bending and shaping of plate without adjusting head, and the rest straight edge is least in all kinds of machines. For this series of machine, upper roll is the driving roll which is driven by driving force, the lower roll and side roll are all driven rolls which rotate by means of the friction between steel plate and each roll, the position of the upper roll is fixed, the lower roll and side rolls rise and fall by means of the driving of parallel connection oil cylinders at the two ends, the overturn and resetting of reverse head at the discharging end of upper roll are driven by oil cylinder. To raise the rigidity of lower roll, support roll is installed in the center of lower roll, which rises and falls by the driving of oil cylinder, this series machine has the following obvious characteristics:

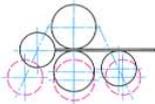

液压泵站 Hydraulic pump station

控制柜 Control cabinet

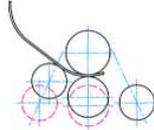

1. The bearing of working roll adopts self-aligning rolling bearing for rolling mill, which has small friction, small power loss, long service life and low energy consumption.
2. Synchronous up-down all of two ends of lower roll and side roll, amount of inclination of taper rolling are all controlled by CNC system automatically; its control precision is high.
3. CNC system is developed by ourselves and keeps ahead at home, and has the function of screen display, rolling calculating, program control, process parameter storage, software protection, failure alarm, man-machine conversation and so on.

WD11 系列

节能环保型对称式三辊卷板机 WD11 series  
energy-saving & environment protection three-roll bending machine

WD11 series energy-saving and environment protection three-roll machines is a new product with proprietary intellectual property right on the basis of absorption of European technologies. It has three national proprietary technologies: a kind of dual drive bending machine (ZL200610005692.4), lifter for bending & lapping machine (ZL2005100098888.8) and stander assembling bending machine (ZL200610006589.1). The series of machines has novel structure and superior performance. Features of the machine are as follows:

1. The two bottom rolls are driven via separate power system, eliminating the mechanical interfering. And, the bearings of the rolls are self-aligning mill-roll bearings, with low energy consumption. The required power from the main motor is small, energy saving and environmental protecting.
2. The worm & gear, screw & rod for up roll are all immersed in the lubricant oil with excellent lubrication, great bearing capacity and long life.
3. The stander is assembling type, which is convenient for installation and maintenance.
4. The turning of turn end is mechanical driven, convenient and reliable.
5. The single end of the up roll can be lifted separately for the bending of conicylinder via the clutch.

## WE11 系列 船用三辊卷板机

WE11 series of CNC shipyard plate bending machine

WE11K (N) series of CNC machines are designed and developed under the instruction of German experts. It owns several Chinese creations and its technical level is equal to the advanced international ones. It has the following three proprietary intellectual property rights: dual drive three-roll bending machine (ZL200420096162.1), a kind of siamesed hydro cylinder (ZL200510053247.8) and a kind of marine bending machine (ZL200520129155.1). The series of bending machines have novel structure and superior performance. Features of the machine are as follows:

1. The optimal model in China, manifesting the advanced European technology.
2. Adopting the proprietary technology that the two bottom rolls are driven via separate power system, eliminating the mechanical interfering. And, the bearings of the rolls are self-aligning mill-roll bearings, with low energy consumption. The required power of the main motor is small, energy saving and environmental protecting.
3. Adopt the proprietary technology that setting several groups of mechanic-height-adjusting backup rolls between the up-roll and the up-beam. It could reduce the deflection of up beam and the bed during the process of plate bending, which increase bending accuracy.
4. The synchro-lift of both ends of the up roll is controlled by CNC system with high control precision.
5. With relative moulds, plate bending & pressure forming can be processed to meet various demand of customers.

## WS11 系列 液压水平下调式三辊卷板机 WS11 series of CNC bending machine with bottom rollers adjustment

WS11K (N) series of CNC machines is a kind of new product, which is designed and developed under the instruction of German experts. It owns novel structure, superior performance and its technical level is equal to the advanced international ones. The series of machines adopt several national patent technologies with absolute proprietary intellectual property rights. Beside the common characteristics, that is, one feeding of metal plate materials realizes the pre-bending & bending via the horizontal moving of the two bottom rolls, it also has following features:

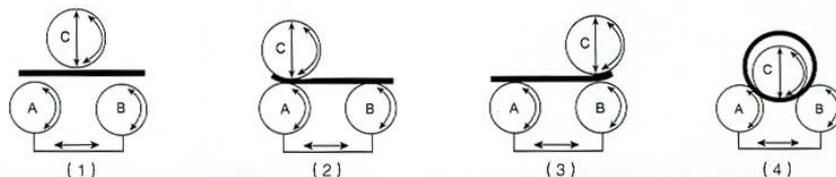

1. Adopt the proprietary technology of Dual Drive Three-roll rolling Machine (ZL200420096162.1). The two bottom rolls are driven via separate power system, eliminating the mechanical interfering, vibration and abrasion from the sliding frictions. And, the bearings of the rolls are self-aligning mill-roll bearings, with low energy consumption and noises. The required power from the main motor is small, energy saving and environmental protecting.

2. Adopt the proprietary technologies of Hydraulic Three-roll bending Machine (ZL200420001177.5), a kind of siamesed hydro cylinder (ZL200540053274.8) and a kind of cone rolling (ZL200520129154.7). The turn end is set beneath the bed, compacting the whole machine structure and reducing the volume of the turn end. It not only reduces the space requirement and power for the turning of the end, but also enables the bending of small cones and dish plats, expanding its applications.

3. Adopt the proprietary technology of horizontal moving (ZL200520007511.2). So the structure of the horizontal shift unit is compact and brings concise positioning & convenient maintenances.

4. The synchro-lift of both ends of the up roll, the amount of the gradient for the cone-shape and the horizontal moving are all automatically controlled via numerical control system with high control precision.

5. The CNC system is self-developed and advance in China. It has the functions of screen displaying, bending calculation, program controlling, parameter storing, software protection, default alarming and human-machine dialog, etc.

QC12Y(K)

系列液压（数控）摆式剪板机

Series hydraulic swing type plate cutting machine

#### Features of QC12Y (K) series hydraulic swing type plate cutting machine

- All welded steel structure has enough strength and rigidity.
- Tool rest makes swing type movement and guide rail system doesn't need
- Advanced inserting type logic valve integration system is used, which has compact structure and flexible and reliable operation.
- Tool rest and pressing leg act in order, firstly press and then cut material, pressing force increases with cutting force and operation is safe.
- Has quick and accurate tool blade clearance adjustment device.
- Mobile back gauge device has quick adjustment, can be made fine adjustment manually and has digital display.
- Has light alignment device for the convenience of marking line and cutting.
- Has counting location function and travel adjustment function and has high production efficiency.
- Has multiple operation functions such as inching and single time and is convenient for adjustment, operation and maintenance.
- Equipped with the security defend bar.
- The CNC cutting machine controls back gauge X-axis, CNC system is DAC-310 or E-20.

QC11Y(K)

系列液压（数控）闸式剪板机  
Series hydraulic CNC guillotine machine

Features of QC11Y (K) series hydraulic CNC guillotion machine

- All welded steel structure has enough strength and rigidity.
- Series connection of oil cylinders has good synchronous performance, cutting angle can be adjusted and cutting quality is high.
- It uses rolling clamp of guide rail that not only can ensure stable operation of tool rest, but also can realize quick adjustment of tool blade clearance.
- Tool rest travel can be stepless adjustment so as to improve production efficiency.
- Back gauge moves quickly and locates accurately.
- The CNC plate-cutting machine can control back gauge X-axis, can also control X-axis and several auxiliary functions, CNC system is DAC-350, or DAC-310 E-20.

## WC67Y(K) 系列折弯机 Series press brake

### WC67Y series CNC hydraulic press brake characteristics

- All welded steel structure, sufficient strength and rigidity.
- The hydraulic drive type, which is forced synchronization by torsion shaft.
- Mobile back gauge can be rapidly adjusted, can be fine-tuned manually, digital displayed.
- The lower limit position of the slider can be mobile adjustment, can be fine-tuned manually, digital displayed.
- The upper die is equipped with tilted wedge-deflection compensation institution.
- Have the inching, single-operating functions, debugging, maintenance and use are convenient.

### WC67K series CNC hydraulic press brake characteristics

- Equipped with DA-41 or E-20 CNC system
- CNC 2 axis, slider stroke Y axis and back gauge X axis.
- Other is the same WC67Y series press brake features.

Main technical parameters of WC67Y (K) series hydraulic (CNC) plate press brake

型号 Type	公称力 (KN) Nominal force(KN)	工作台长度 (mm) Workbench length (mm)	立柱间距 (mm) Distance between columns (mm)	喉口深度 (mm) Throat depth (mm)	滑块行程 (mm) Sliding block travel (mm)	行程调节量 (mm) Travel adjustment quantity (mm)	最大开 启高度 (mm) Maximum opening height (mm)	速度 (mm/s) Speed (mm/s)			主电机功 率 (KW) Power of main motor (KW)

**WD67X(K)** 系列折弯机  
Series press brake

**WD67X series CNC hydraulic press brake characteristics**

- All welded steel structure has enough strength and rigidity.
- The hydraulic drive structure is forced synchronization by torsion shaft.
- Two oil cylinders are installed on left and right wallboards and have rational stress, the location of the lower dead point of the upper slider is by oil cylinder internal block which has compact structure.
- Lower limit position of upper slider journey and back gauge journey location are digital displayed, easy to operate, accurate to locate.
- Tilting wedge flexibility compensation mechanism is equipped with on the upper die.
- It has multiple operation functions such as inching and single time and is convenient for adjustment, operation and maintenance.

**WD67K series CNC hydraulic press brake characteristics**

- Equipped with DA-41 or E-20 CNC system.
- CNC 2 axes: slide stroke Y axis and back gauge X axis.
- Other is same as WD67X series press brake features.

Main technical parameters of WD67X (K) series digital display (CNC) hydraulic plate press brake

## WS67K 系列数控折弯机 Series CNC press brake

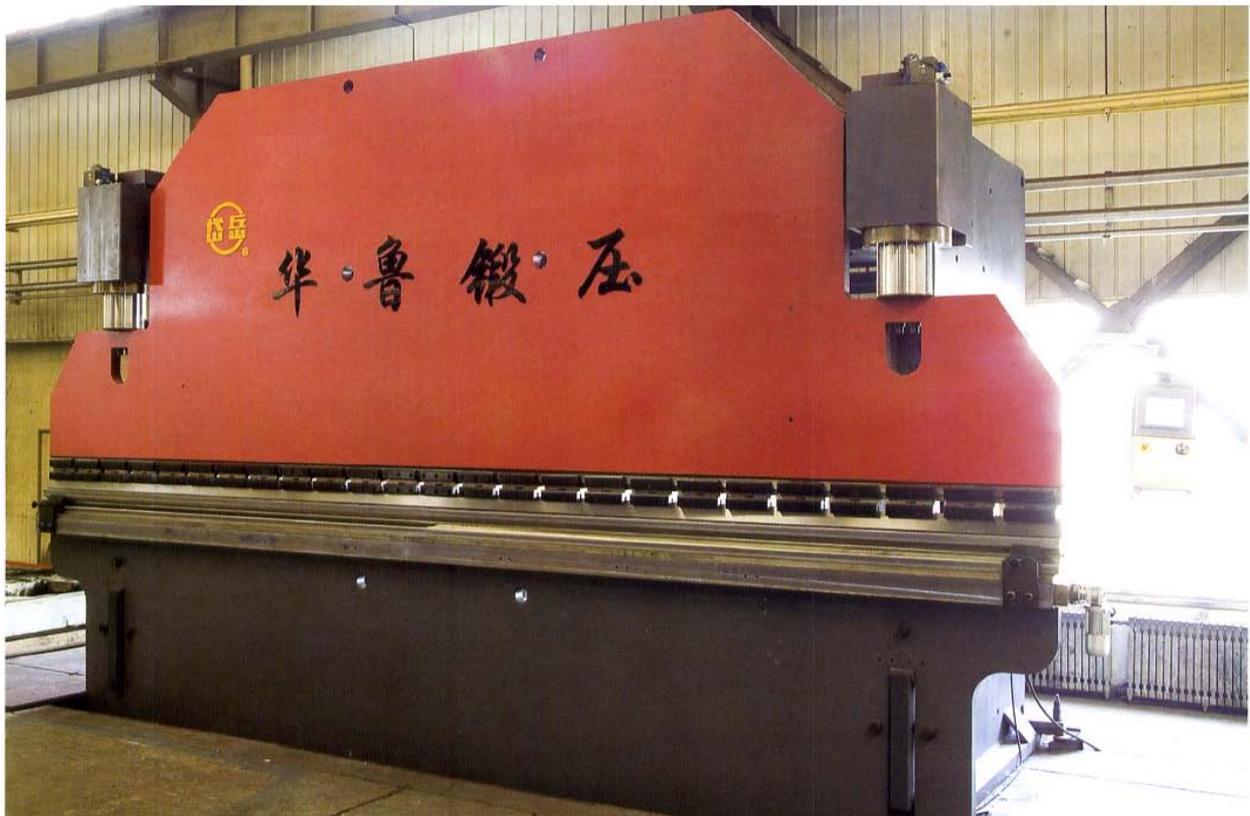

The machine is advanced and beautiful, two oil cylinders are fixed on the left-right walls which is reasonable in stress, high in rigidity. Adopt the electro-hydraulic servo synchronization type to ensure good synchronous of cylinders. It is strong in anti-deflection-load capacity, easier in debugging. Two oil-cylinders journey Y1 and Y2 are single controlled, the slider displacement is checked with the grating ruler to ensure high synchronous precision.

CNC system is DA Series CNC system of Netherlands Delem company (DA-65W, DA-56, DA-53).

The worktable deflection compensation (V axis) is the hydraulic cylinder automatic compensation or tilted wedge deflection automatic compensation, the CNC system controls the cylinders pressure or tilted wedge moving distance to realize that the middle table-board protruding to compensate the deflection. The compensation is accurate.

The hydraulic valve block is BOSCH-REXROTH dedicated valve block matched with the CNC, the cylinders sealing elements are the imported products, grating ruler is Germany HEIDENHAIN products, main electrical components are imported components.

The back gauge standard match is the X axis, driven by AC servo motor, the transmission components are ball screw pairs and linear guide pair.

WD43 系列

矫平机

WD43 series plate straightening machine

WD43M-40×2000 ( $\delta \leq 690\text{MPa}$ ) 矫平机用于中煤北京煤矿机械有限公司  
Plate straightening machine for China Coal Beijing Coal Mining Machinery Co., Ltd.

With the cooperation of Germany experts, WD43 series plate straightening machine has been designed and developed specially to handle the levelling difficulty and low levelling quality of high strength steel plate, explosive clad plate, parts and components. Currently, it is the best machine type. It consists of many single beams which the up rolls are installed separately on them and every single beam has a transfer device and digital display device, and the relative position of every single beam can be adjusted freely, so, in addition to paralleling and inclining functions, the top rolls of this machine can form V shape arrangement which is convenient for high strength steel plate levelling, especially for those large scale high strength steel plate levelling. It can meet the requirement of high precision and steady performance of ordinary steel plate and high strength steel plate, and it can solve the problem that ordinary machine can not flatten high strength steel plate.

This series machine has adopted five national patents: ZL200510085799, ZL200420001176.0, ZL200420001178.X, ZL200520007514.6 and ZL200520019234.7.

产品规格 Production specification	最大矫平板宽 (mm) Maximum levelling plate width (mm)	最大矫平板厚 (mm) Maximum levelling plate thickness (mm)	最小矫平板厚 (mm) Minimum levelling plate thickness (mm)	板材屈服极限 (MPa) Yield limit of plate (MPa)	工作辊辊数(n) Quantity of working roller (n)	矫平速度 (m/min) Levelling speed (m/min)	主电机功率 (kW) Power of main motor (kW)
16×2000	2000	16	6	≤ 1500	9	7	2×55
20×2000	2000	20	6	≤ 700	9	7	2×33
20×2500	2500	20	5	≤ 245	7	9	2×15
25×2000	2000	25	6	≤ 245	7	9	2×15
25×2500	2500	25	6	≤ 245	7	9	2×15
30×1800	1800	30	8	≤ 360	9	7	2×22
30×2500	2500	30	8	≤ 360	7	6.5	2×26
40×2000	2000	40	12	≤ 690	7	6.5	2×40
40×2500	2500	40	12	≤ 360	7	6.5	2×40
40×3000	3000	40	12	≤ 245	7	7	2×40
40×4000	4000	40	12	≤ 345	9	7	2×75
50×2500	2500	50	12	≤ 1100	7	7	2×90
50×3500	3500	50	12	≤ 360	7	7	2×52
60×3000	3000	60	12	≤ 345	7	7	2×52
80×2200	2200	80	30	≤ 245	7	7	2×30
100×3000	3000	100	30	≤ 245	7	7	2×75

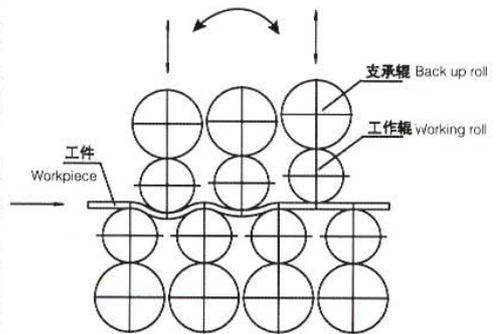

## WC43 系列

## 矫平机

WC43 series plate straightening machine

WC43 series machine is integral lifting of top rolls. All top rolls are fixed on the movable crossbeam, and are lifted along with the movable crossbeam which is driven by two lifting mechanisms; each mechanism includes a motor, two worm reduction gears and screw nut pairs. The two mechanisms can work at the same time, or separately, that is to say the feeding opening and discharge opening of the working roll can be equal or unequal to make it easy for traveling and levelling of opening sheet metal; the opening height at the feeding and discharge ends of the top roll are displayed accurately through two displacement sensors on the display screen.

The characteristic of this machine is that it has adopted two national patent technologies: group driving plate levelling machine ZL200420001176.0 and axial decelerating motor leveler ZL200520007514.6. Each top roll is driven by a set of decelerating motor, and every two lower rolls are driven by a set of dynamic system, so that the line speed of each roll is consistent with sheet metal speed of the contacting part, so it solved the problems existing in traditional transmission system, such as friction between sheet metal and roll surface, and mechanical interference problem in the system. And, the working roll adopts self-aligning roller bearings which have little friction resistance, so this series has such advantages as high levelling quality, little noise, low energy consumption and environmental protection compared with traditional levelers.

WB43 系列

矫平机

WB43 series plate straightening machine

WB43 series plate straightening machine is made of rack, working roll, movable crossbeam, screw down mechanism, catch wheel device, main gearing, lubrication system, and electrical control system, etc. It is used for levelling of thin sheet.

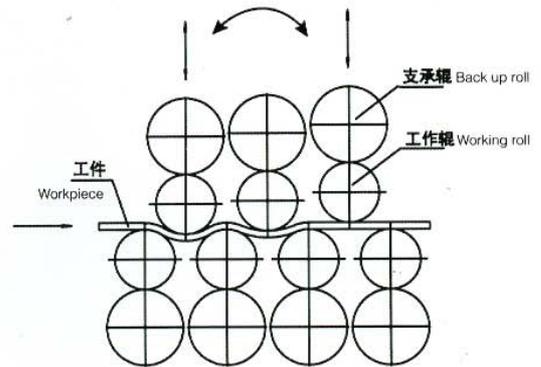

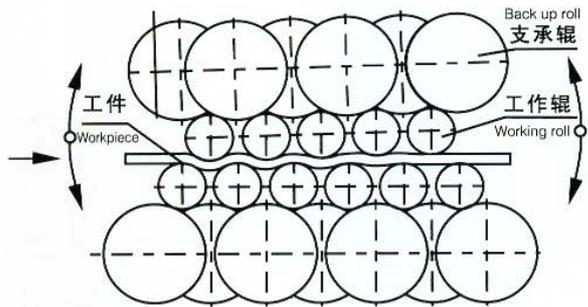

WB43M-12 x 2600 ( $\delta \leq 360\text{MPa}$ ) 矫平机用于沈阳透平机械股份有限公司  
Plate straightening machine is used for Shenyang Turbo Machinery Co., Ltd.

WB43M-3×800( $\delta \leq 600\text{MPa}$ ) 钨钼板矫平机用于株洲硬质合金集团有限公司
